

## Customized insulation solutions for architecture and construction

### CORKWAVE ACOUSTIC

CorkWave Acoustic system which consists of an acoustic and thermal insulation system, created from the waves presented in the expanded cork sheet.

Very pleasant to the eye, the CorkWave Acoustic system allows the creation of interior and exterior facades and walls adjustable to the personal taste.

This idea came up as a complement to architecture, combining the thermal and acoustic insulation properties of cork to its esthetic effect.

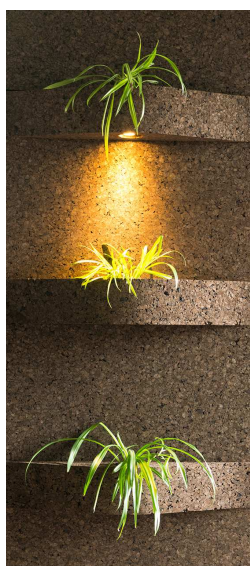

Cork's ecological character and the new wavy look of CorkWave Acoustic makes it a very innovative solution, where originality and acoustic performance stand out.

### CORKWAVE GREEN

The CorkWave **Green** system is born from the CorkWave Acoustic, for the production of interior or exterior vertical gardens.

The desire of having a vertical garden combined with the insulating characteristics of cork, made it possible for the creation of this harmonious piece of design.

The curves of the CorkWave **Green** sheets are the base for the plants vases, which will look as if suspended in mid air coming out of the wall.

With this symbiosis, it is possible to have an indoor garden in perfect harmony, at the same time improving the acoustic conditions.

#### Use / benefits

- Thermal and sound correction
- Thermal coefficient correction, for 500Hz - 0,39
- Intern and extern use
- Easy to apply
- Decorative solutions
- Does not needs finishings
- Long durability
